

AME Meets with Dr. Jim Bennett

- LPS Creator Holds One-Day Seminar in El Dorado Hills, California -

- Dr. Bennett Describes AME's incorporation of LPS as "exceptional" -

EL DORADO HILLS, CA – March 2, 2007 --Dr. Jim Bennett, founder of Loss Prevention Systems Inc. (LPS), discussed behavior-based safety in an all-day workshop with Acton • Mickelson • Environmental, Inc. (AME) this past Friday. The entire AME staff was present in El Dorado Hills, California for the workshop, as well as invited guests from Cascade Drilling. During the day, Dr. Bennett discussed stewardship of LPS and how implementation of LPS has reduced workplace accidents worldwide. The morning session covered methods for modifying human behavior and for delineating the true root cause of a safety incident or questionable behavior. Dr. Bennett also discussed his experiences in implementing LPS worldwide and stressed that the key tenet of LPS is changing behaviors to eliminate the factors that can lead to safety incidents.

In the afternoon, Dr. Bennett reviewed the LPS tools to evaluate human behavior and how to correctly complete the various LPS forms. Dr. Bennett reviewed several previously completed, randomly selected AME Loss Prevention Observation and Job Safety Analysis forms. He discussed the findings of his review in detail, outlining areas for potential improvement and congratulating AME staff on the quality of their written observations and follow-up verification. Dr. Bennett summarized his review by stating that AME's incorporation of LPS was exceptional, and that the manner in which AME had completed the tools was "incredibly good." He indicated that AME was "in the top 10 percent of companies that he has reviewed" and encouraged the entire staff to keep up the good work.

Dr. Jim Bennett illustrates the finer points of LPS to AME staff.

Dr. Bennett outlines the components of Personal Behavior on ensuring safe work activities.

Dr. Bennett Supports AME Development of Interactive LPS Database Module

- AME Information Technology Staff Developed the Interactive AME LPIS Database Module-

- AME's Commitment to LPS Recognized by Dr. Bennett as "One of the Best" -

EL DORADO HILLS, CA – March 2, 2007 --Dr. Jim Bennett, founder of Loss Prevention Systems, Inc. (LPS), congratulated the staff of Acton • Mickelson • Environmental, Inc. (AME) for its development of the interactive AME LPIS (Loss Prevention Information System) database module, under AME's license with LPS, Inc. The Information Technologies staff of AME developed the AME interactive component to the LPIS database to enable real-time field preparation of LI/NLI and LPO reports using laptop-based data entry screens, which allows real-time interactive communication with AME project managers and key ExxonMobil staff. The AME LPIS module, which was developed with support from LPS, Inc., also enables notification of AME personnel of LI/NLI and LPO feedback sessions, investigations, and report submittal deadlines via e-mail and text messages generated from the database itself to the appropriate field and office staff.

Dr. Bennett highlights a point to Michael Acton and Barbara Mickelson of AME.

AME is currently implementing the LPS database module, which has improved integration of LPS within AME and allowed for more efficient and effective tracking and completion of LPO and LI/NLI reports. AME's commitment to LPS was recognized by Dr. Bennett as "one of the best." As LPS continues to develop and evolve at AME, the Interactive LPIS database will become an integral component in coordination of field activities with management to ensure that in the AME workplace – Nobody Gets Hurt.
